A **apehlivan1** 2:59 PM Nov 11

Moguća optimizacija koda:

public async Task> GetCourseNamesList()
{
var user = await _userManager.GetUserAsync(User);

```
1.              <code>var courses = await _context.Course
2.                  .Where(c =&gt; c.TeacherID == user.Id)
3.                  .Select(c =&gt; new SelectListItem { Text = c.Name, Value = c.ID.ToString() })
4.                  .ToListAsync();
5.
6.              return courses;
7.              </code>
```

}

ooad23-zamger Implementacija/Controllers/ExamController.cs main 40f4632

```
41.          public async Task<List<SelectListItem>> GetCourseNamesList()
```
